DETAILED ACTION

Drawings

1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawakubo et al..

Kawakubo et al. (Fig. 17) shows an integrated circuit having all the elements as recited in claims as follows:

- a plurality of memory cells (left QM0-QM15) coupled in series to form a first group;
- a bitline (BL0) coupled to a first end of the group; and

- a first section switch (left QREF) coupled to a second end of the group and a plateline (PL), the section switch, when activated, selectively couples the plateline to the group.

With respect to claims 3-6, the second memory group and a second section switch are considered the plurality of memory cells (right QM0-QM15) and right QREF, respectively.

Claim Rejections - 35 USC § 103

4. Claims 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawakubo et al..

The only difference between claims 7-14 and Kawakubo et al. is the use of a complementary bitline. However, the use of a complementary bitline and a bitline to form a bitline pair is well-known in the art to provide complementary signals to the memory cells. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Kawakubo et al. by using a complementary bitline in order to provide complementary signals to the memory cells in a memory device.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Takeuchi et al. discloses a ferroelectric memory device.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huan Hoang whose telephone number is (703) 305-3494. The examiner can normally be reached on Mon-Fri 8:30AM-5:00PM.
